Bids and Engagement CGIs by PreConVision

PreConVision is a multi-award winning creative studio space based in Central London, specialising in construction industry bids, engagement CGIs and 4D visualisations. They have the ability to create innovative multi-dimensional designs, helping clients to envision projects before completion.

Utilizing the latest technology that allows the company to present immersive spaces that the clients can experience, this virtual construction firm is at the forefront of working with construction firms across the globe. Many of their projects use 3D city models by AccuCities.
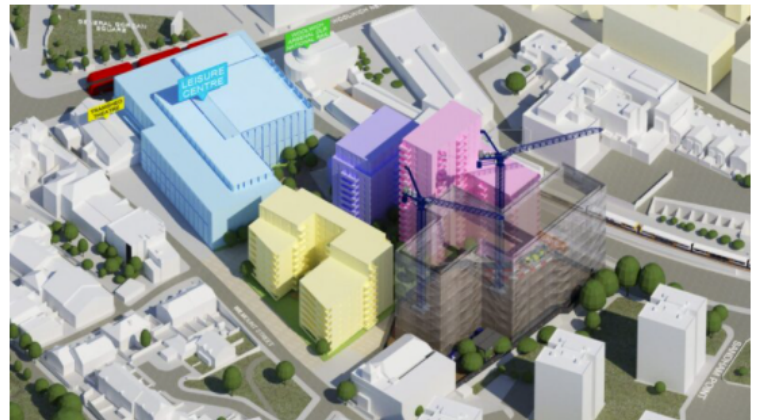

Masterplanning and Urban Regeneration Projects

In their bids and construction process animations, PreConVision uses AccuCities models of the existing wider area site. They add significant value to the 3D model by upgrading important buildings and features to Level 4. They further use it to tell the regeneration story in phases.

"We have worked on PreConVision on many projects over the years," says Michal Konicek, AccuCities Director. *"There must have been perhaps 15 high-profile projects in Central London and numerous smaller ones. Because we don't know how they use our models at the time, every time they publish their projects it amazes me to no end how much Chris and his team can get out of simple 3D context models. Building on the accuracy and geo-referenced, OS mastermap overlaying models, they upgrade, change and manipulate them to tell their story. It is great to see them this successful."*

Exceptional Stakeholder & Engagement Package

PreConVision also offers Stakeholder & Engagement Package. This service consists of delivering a 3D communication software capability tool to promote the construction phases of a project, but to a larger audience in real-time 3D rendering. Using such software like Autodesk Infraworks 360 can create the most effective collaborative experience with Stakeholder meetings, Site induction meetings, Planning meetings, Logistics strategy meetings and/or Neighbour liaison monthly meetings.

Visit PreConVision.co.uk to learn how they can assist in your projects.
