

AccuCities® textured 3D London samples on Unreal Engine Marketplace

A large free sample of the AccuCities® textured 3D Model of London 2022 is now available on the Unreal Engine marketplace. Unlike many other assets on the marketplace, our 3D city models focus on accuracy and level of detail, rather than on the visual fidelity. We are therefore incredibly thankful to Epic Games for not only approving our samples assets, but also for making them part of their permanently free showcase collection.

The textured 3D Model of London 2022 is the latest version of AccuCities digital city model which has been in continuous development for over 5 years. This long-awaited dataset has been created using our large and detailed Level 3 city model and the latest high-resolution oblique imagery. It is available in a multitude of formats including FBX, SKP and now in a native UE4 format.

FREE Textured 3D London 2022 sample

Free 1 km² textured 3D Model of London 2022 sample consists of four 0.25 km² – TQ3280SE, TQ3280SW, TQ3280NE, TQ3280NW.
